Predictive Maintenance Model

This app predicts the condition of a hydraulic test rig system.

Predict condition

Inputted data shown below

After clicking the Predict condition, the inputted data would change to Principal Component Analysis (PCA) data as this was used to develop the model

	pressure_readings_1	pressure_readings_2	pressure_readings_3	pressure_readings_4	pressure_readir
0	155.1	125.9514	172.2838	103.8646	59.

The model behind this predictions was developed based on the data of the sensor readings of the stable cycles from the UCI Hydraulic Test Dataset for predictive maintenance
